Flight Price Prediction

About Dataset

The dataset provides a comprehensive overview of flight details, focusing on various key attributes related to airline operations. It includes information on:

- Airlines: Names of the airlines operating the flights.

- Source and Destination: Cities where flights originate and land.

- Total Stops: Number of stops made by the flights.

- Price: Ticket prices for the respective flights.

- Date, Month, and Year: Specific dates on which the flights are scheduled.

- Departure and Arrival Times: Detailed hours and minutes for both departure and arrival.

- Duration: Total duration of flights in hours and minutes.

A partir de ce dataset vous pouvez tenter de prédire le prix d'un ticket d'avion contenu dans la variable Price.

Essayez plusieurs modèles de régression et évaluer vos résultats avec les métriques adaptés.
